Discovery Tool

An idea management system

Team 3

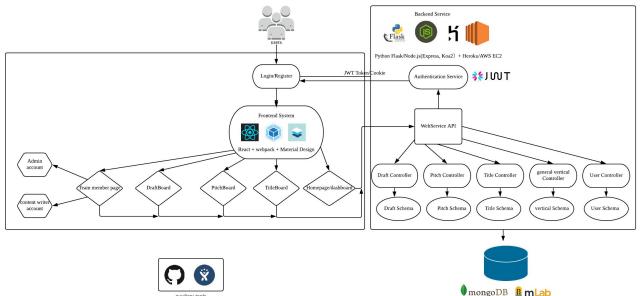

Project overview

Discovery Tool is a web app based **idea management system**. It serves as an **internal tool** to System1. It provides a solution to **help System1 admins and content contributors to streamline, manage, accelerate their workflow**. It gives the admins necessary tooling to quickly **scale the team as well as content production**. Overall, the system supports the team to work cross-functionally, leveraging resources to meet needs as efficiently as possible.

Stakeholders	Initiatives	Value Propositions	Beneficiaries
-System1 Super Admin -System1 Admins -System1 Contributors -System1 Maintainer	-Admins and contributors correctly use the app -Maintainers maintain the whole system after handoff occured -Admins and contributors are responsive to the different stages of idea formulation -Developers implement system to mimic and streamline existing process on idea formulation	-Modernized frontend and backend technology -Streamlined process with real-time feedback -Ease of scaling the project and team size -Monitored and transparent team performance, progress, and goals -Improved organization, tracking, and resolution of content disputes	-Super Admin -Admins -Contributors -Maintainer

Technologies

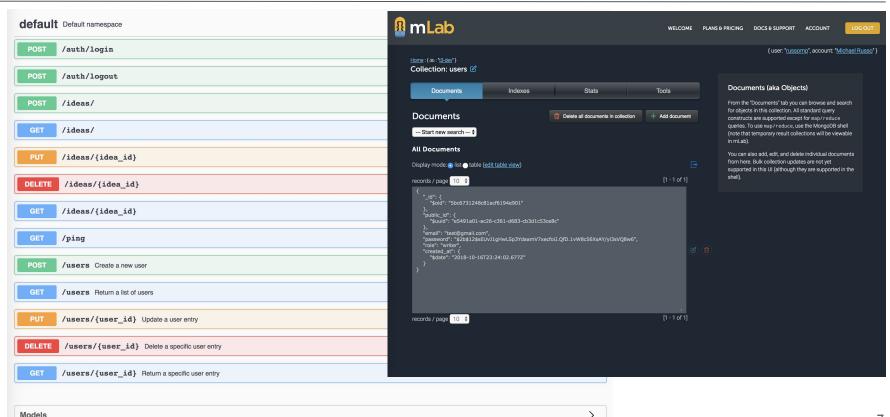

- Frontend: React/Redux + webpack + Material Design
- Backend: Python Flask/Node.js(Express/Koa2)
- Database: mLab(mongoDB)
- The whole architecture is based on RESTFul API, MVC pattern and microservices, realize frontend and backend separation
- High performance on scalability, availability and usability based on mature cloud services (AWS EC2 Auto Scaling, Heroku distributed dynos, mLab DAAS features, etc)

NDI/NCS Products	Purposes	Comments	
React	Front-end Framework	 Positive Points: Better performance Better compatibility among web browsers Better ecosystem Negative Points: Learning curve 	
Flask	Back-end Framework	Positive Points: Open source Light Weight Familiar by the client Negative Points: Have to use third party extensions	

NDI/NCS Products	Purposes	Comments	
MongoDB	Database	Positive Points: • Flexible and schemaless • Support large scale of data Negative Points: • Lack of community support with respect to Flask integration	
AWS	Cloud Server	Positive Points: • Easier than building local server • Cheaper when having small data scale • Safe Negative Points: • More complex setup compared to alternatives (Heroku)

Lesson Learned

Product Development

- The client does not always know what they want (ikiwisi)
- All success-critical stakeholders should be involved as early as possible
- Feedback loops should be shortened where possible

Process

- Willing commitments yield better work
- Openly stated and publicly hosted commitment tracking can be used as an effective accountability and motivation mechanism

Moving Forward...

- Implement changes based on feedback from most recent client meeting
- Finalize UI and backend API
- Start discussions with the maintainer
